

ESEPAC

*The European Institute for
Packaging Technology*

**ESEPAC PROVIDES ADVANCED
& DYNAMIC TRAINING CLOSE
TO THE INDUSTRY**

Its mission : to take part in the development of all forms of Packaging.

ESEPAC prepares its students for careers in the packaging industry. The curriculum is designed to reproduce as closely as possible challenges and situations faced in the work environment.

Its structure : A syllabus created in collaboration with firms involved in the Packaging sector.

The Director himself has many years of experience in Packaging Development.

The participants : University professors and a number of leading industrialists provide training to our students.

COURSE CONTENTS

. Masters in Packaging Engineering
(European diploma, 5 years after A' Level)

2-year managerial training (1,140 hours)

15 modules provide a theoretical and practical approach to packaging processes :

Management, scientific aspects of packaging materials, applications – performances, physics – mechanics, Project Management competences – innovations, biology, statistics – metrology, numerical printing chain, marketing, packaging course (in English), human sciences, know-how and People Management.

. University Diploma in Packaging Development (French diploma, 4 years after A'Level)

2-year technical training (1,350 hours)

12 modules give a structured and functional vision of the packaging field :

The packaging and processing field, packaging firms, development of new packaging requirements, “Packaging-Product” adequacy, quality control, design and visual solutions, technical solutions (materials, machines), waste – recycling and environmental legislation, purchasing techniques, commercial techniques, human resources & English courses.

Both degrees involve participating in industrial development projects and require two periods of internship, either in France or abroad.
